Topic 1: Smart Queue Management System

Why We Chose This Topic:

In many public places such as hospitals, banks, railway stations, and government offices, people often face long waiting queues. This results in time wastage, overcrowding, and inconvenience for users. Traditional queue systems are inefficient and do not provide real-time updates or proper scheduling.

We chose the topic "Smart Queue Management System" to address this issue using digital technology. The proposed system allows users to book their queue slots remotely, monitor waiting time, and receive notifications when their turn is approaching. This reduces physical crowding and improves service efficiency.

This topic was selected because it represents a real-world problem that affects a large population. The solution is practical, scalable, and can be implemented across various sectors. Therefore, it is both innovative and feasible for developing a startup business plan.

Topic 2: Portable Water Quality Scanner

Why We Chose This Topic:

Access to clean and safe drinking water is a major concern, especially in rural areas, hostels, and public places. People often consume water without knowing its quality, which can lead to serious health issues. Existing solutions are either expensive or not easily accessible to common users.

We chose the topic "Portable Water Quality Scanner" to solve this problem through an affordable and easy-to-use device. The system can quickly analyze water quality parameters and provide instant feedback through a mobile application.

This topic was selected because it addresses a critical health and environmental issue. The solution is innovative, socially beneficial, and has strong potential for real-world application. It also combines engineering design with practical usability, making it suitable for a startup business plan.

Topic 3: Smart Resume Verification System

Why We Chose This Topic:

In today's competitive job market, many candidates exaggerate or provide false information in their resumes. This creates challenges for recruiters in identifying genuine candidates and increases the risk of hiring unqualified individuals.

We chose the topic “Smart Resume Verification System” to tackle this issue using intelligent technology. The system verifies candidate skills through automated assessments and provides a reliability score for each resume.

This topic was selected because it solves a modern recruitment problem and improves transparency in hiring processes. The solution is innovative, relevant to the IT industry, and has strong business potential. Hence, it is an appropriate choice for developing a startup plan.

Topic 4: Digital Waste Segregation Assistant

Why We Chose This Topic:

Improper waste management is a major environmental problem. Many people are unaware of how to correctly segregate waste into categories such as dry, wet, and hazardous. This leads to pollution and inefficient recycling processes.

We chose the topic “Digital Waste Segregation Assistant” to help users identify and separate waste correctly using a mobile application. The system guides users by scanning items and providing proper disposal instructions.

This topic was selected because it promotes environmental sustainability and responsible waste management. The solution is simple, practical, and beneficial for society, making it a strong and meaningful business idea.

Topic 5: Smart Parking Availability System

Why We Chose This Topic:

Finding parking in urban areas is a common problem that leads to time wastage, fuel consumption, and traffic congestion. Drivers often struggle to locate available parking spaces, especially in crowded cities.

We chose the topic “Smart Parking Availability System” to solve this issue using real-time data and digital technology. The system helps users locate available parking spaces and reserve them in advance through a mobile application.

This topic was selected because it addresses a practical urban problem and offers an efficient solution. It is innovative, scalable, and has high demand in modern cities, making it suitable for a startup business plan.
